VDIC-MRAM

HIGH-SPEED 3.3V 8M × 8bit

MAGNETORESISTIVES RANDOM ACCESS MEMORY

1. DESCRIPTION

The VDMR64M08XS54XX4V35 is a $4 \times 16,777,216$ -bit high-speed access time, high-density Magnetoresistives Random Access Memory device. Manufactured with VDIC Very Dense SiP technology, this Die stacks four 16-Mbit MRAM Dies. It is organized as four independent dies of 2Mx 8bit wide data interface.

The VDMR64M08XS54XX4V35 offers MRAM compatible 35ns read/write timing with unlimited endurance. Data is always non-volatile for greater than 20-years. Data is automatically protected on power loss by low-voltage inhibit circuitry to prevent writes with voltage out of specification. The VDMR64M08XS54XX4V35 is the ideal memory solution for applications that must permanently store and retrieve critical data and programs quickly.

The VDMR64M08XS54XX4V35 has four dies. Each die can be selected separately with dedicated #CEn. Low interconnect parasitic capacitance of the stacking technology, by reducing the connection length, allows this MRAM module to be useful for a variety of high bandwidth, high performance and high density memory system applications.

The VDMR64M08XS54XX4V35 is available in a 54-pin SOP package.

5. ELECTRICAL SPECIFICATIONS

5.1. ABSOLUTE MAXIMUM RATINGS

This device contains circuitry to protect the inputs against damage caused by high static voltages or electric fields; however, it is advised that normal precautions be taken to avoid application of any voltage greater than the maximum rated voltages to these high-impedance (Hi-Z) circuits.

The device also contains protection against external magnetic fields. Precautions should be taken to avoid application of any magnetic field more intense than the maximum field intensity specified in the maximum ratings.
